

REFERENCE NO.36

Absolute Authority. Complete Control.

The Ultimate Expression of Reference

No.36 stands at the pinnacle of REL. Created for the world's most ambitious music and theater systems, it combines extraordinary scale and effortless authority with the speed, nuance, and integration that define Reference.

Pure Carbon Fibre

No.36 applies REL's finer 12K Pure Carbon Fibre weave to its legendary 15-inch driver. Greater strength and improved self-damping create a quieter, more controlled cone, while the revised suspension allows greater travel. The result is exceptional speed, precision, and control at breathtaking scale.

Absolute Power

An entirely new 1,000-watt RMS Class AB/D amplifier delivers immense current with remarkable speed and composure. It combines the authority of a traditional Class A/B power supply with the speed and efficiency of a Class D output stage, maintaining complete control through the most demanding musical and cinematic passages.

Complete Control

Dual Parametric EQ and REL's renowned High Level Connection allow No.36 to integrate precisely with both the loud speakers and the room. Sound staging opens, dynamics become effortless, and the entire system gains clarity, dimensionality, and scale.

Measurements guide the engineering. Music makes the final decision.

REFERENCE NO.36

Experience the Difference. Experience Reference.

Reference Craftsmanship

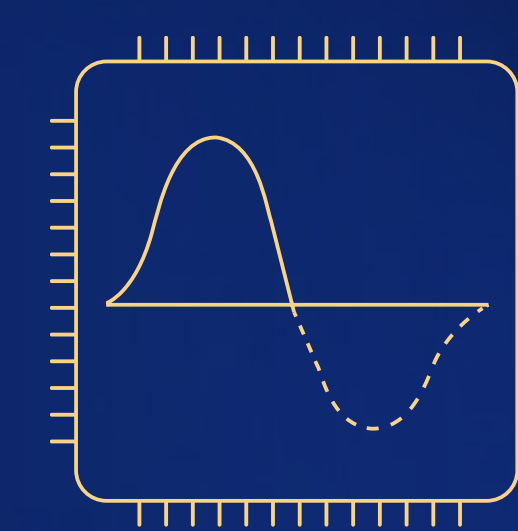

No.36's curvilinear cabinet continues a design lineage inspired by classic wooden runabouts. Continuous curves, extensive internal bracing, and 12 coats of hand-rubbed lacquer unite cabinetry, engineering, and acoustic performance in a single enduring form.

Reference, Evolved

No.36 retains the dimensions of REL's previous 15-inch Reference models, allowing existing owners to incorporate it into Reference Line Arrays with No.32 or No.25. It provides a natural upgrade path that extends the scale, precision, and authority of an existing system while respecting the investment that came before.

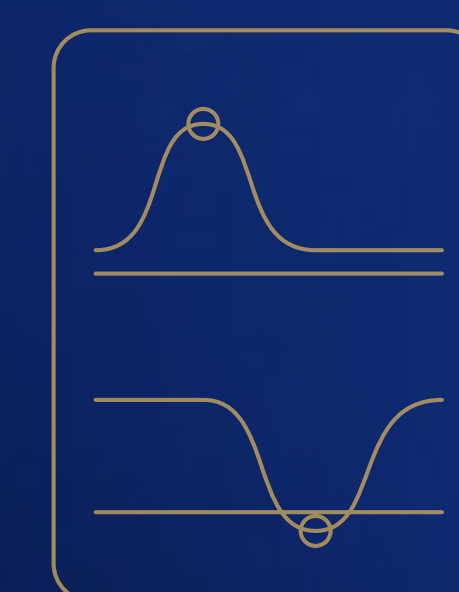

15-Inch 12K Pure
Carbon Fibre Driver

1,000W RMS
Class AB/D amplifier

High Level
Connection

AirShip Direct
Compatible

Tailored for:

- The world's finest two-channel systems
- Reference-level home theaters
- Large and acoustically demanding rooms
- Single, stereo pair, and Reference Line Array configurations

Additional Technical Highlights

Low-Frequency Extension: -6 dB at 15 Hz

Dual Parametric EQ: Precise room tuning and system integration

Configurations: Single, stereo pair, and Reference Line Array

Cabinet: 12 coats of hand-rubbed lacquer

Control: Reference Remote

Wireless: Optional AirShip Direct compatibility
